Allpile V7.3bQ: Change Images on a Windows Phone 8 Application Im building a Windows Phone 8 application that has a slider and I need to change the images on the slider when a button is clicked. Also, this should be done when the application is closed. I am having trouble figuring out how to change the images. I am new to xaml and c#. I looked at this article on codeproject but I did not see anything that I could adapt to make it work. Also, can this be done from another Windows Phone application? A: The way I approached this problem was to simply create an array of the images I needed to change and then just cycle through it. If someone can suggest a better way, I would love to hear it. //This is an array of the images I want to change public string[] images = [@"c:\image1.jpg", @"c:\image2.jpg", @"c:\image3.jpg", @"c:\image4.jpg"] Button.Click { //This loops through all the images in the array and changes them all. //If you want to change only one image, make sure you have only one image in the array. foreach (var image in images) { ImageSource currentImage = new BitmapImage(new Uri(image, UriKind.Absolute)); ImageSource newImage = new BitmapImage(new Uri(@"ms-appx:///ImageResources.xap/image" + image.ToString(), UriKind.Absolute)); ImageBrush myBrush = new ImageBrush(currentImage) 3da54e8ca3
