In this issue, we publish a series of articles highlighting some of our students. We invite you to take a few moments to learn about them. In this issue, we present some of our pupils, their background, their success and their impact on the future of the school. First up is our Head of Physics, Mr Mohammed Ali. Mohammed is a pupil here and has graduated from the University of Birmingham. In this article, he tells us his story and what he is interested in doing next. Keep up to date with what we are doing Follow us on Twitter and Instagram to be updated with all the latest news. Welcome to all of you students, relatives, friends, and well-wishers who have been following SCOLANDSC through videos on YouTube, its dedicated website, or by following me on Instagram! I am truly honoured to serve in this capacity as Director of this institution that has changed the lives of many SCO members who are doing so much for the Indian public. This is my first attempt to upload the Proceedings of SCOLANDSC. You all might not be aware that the I.T cell is actually the oldest and second oldest cell of the Indian Medical Association. My dream as a young student was to become a medical practitioner; and now as a director, it is my dream to motivate my students towards becoming a medical practitioner.

Field of the Invention The present invention relates generally to a method and apparatus for adjusting the output impedance of an amplifier and more particularly to a method and apparatus for adjusting the output impedance of an amplifier having a low output power. 2. Description of the Related Art In an amplifier having a low output power, the output impedance of the amplifier is generally in the range of about 50-300 KOhm. When the output of the amplifier is at a high level, the output impedance is substantially zero. However, when the amplifier is used in high-speed applications, e.g., applications having a high speed signal, it is desirable to adjust the output impedance of the amplifier to a value that provides a high input impedance to the

---

amplifier. For example, during operation in such a high-speed application, the output impedance of the amplifier is desirably approximately one half the input impedance of the amplifier. In a high-speed application, the input impedance of the amplifier is in the range of about 600-800 KOhm. FIG. 1 shows a conventional circuit for adjusting the output impedance of a conventional amplifier. As shown in FIG. 1, the conventional amplifier circuit comprises a bipolar junction transistor (BJT) Q1, a resistor R1, and a bias
